

2700 Series

Irritrol Systems...

The choice of the professional irrigation contractor

Trust the products that irrigation contractors have counted on for years! Professional-grade Irritrol Systems components are designed and manufactured with a focus on heavy-duty construction, dependable operation and homeowner convenience.

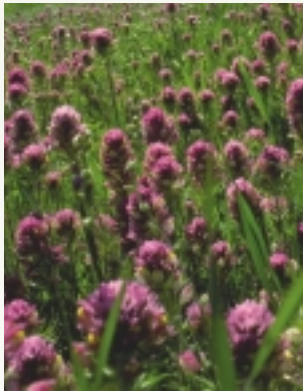

A brand of The Toro Company specifically for professional irrigation installers, Irritrol Systems is a name you can trust to help provide the beautiful, trouble-free lawn and garden your home deserves.

These highly popular anti-siphon valves offer a winning combination of performance, reliability and ease of use for all types of residential landscapes.

Dependability and performance you can see

Installed above ground, anti-siphon valves have two very important jobs. In order to ensure a beautiful landscape, the valve must open and close reliably — every time! It also must protect against possibly contaminated irrigation water from entering your home's water supply.

Rugged and full-featured, Irritrol Systems 2700 Series valves perform these two important functions with outstanding reliability. In addition, they offer a number of advanced features to ensure optimum performance and ease of use.

Designed specifically for residential landscapes, the 2700 Series offers:

- A built-in atmospheric vacuum breaker to protect your home's water supply
- Heavy-duty, corrosion- and UV-resistant PVC, glass-filled polypropylene and stainless steel construction for durability
- Flow control for precise adjustment and manual shutoff
- Specially designed internal components for a leak-proof seal
- A removable, ergonomic, tamper-resistant flow control handle on select models for easy adjustment and manual shut-off
- Threaded "jar top" on select models for ease of maintenance
